One Software = Endless Possibilities

Ship *Smarter* and *Faster* with DigitalShipper

DigitalShipper is designed to meet the shipping needs for companies of all sizes whether you ship 50 packages or 500,000 packages a day. DigitalShipper is affordable software that your company can grow with over time with support for single shipping locations and enterprise-wide solutions for multiple distribution points. DigitalShipper offers **unlimited users**, **unlimited workstations**, **unlimited carrier accounts** and **no transaction fees**!

With DigitalShipper you will immediately benefit from:

- Labor Reductions
- Freight Cost Savings
- Improved Customer Service
- Automation of Shipping Processes
- Increase in Shipping Efficiency and Accuracy

Ship with Ease from One Software Application

DigitalShipper eliminates the need for multiple carrier-provided systems. With DigitalShipper, users no longer have to decide which shipping software they should use and try to remember all the nuances and different processes for each in order to ship a package.

Regardless of the carrier, DigitalShipper creates one simple workflow from a single software application that can handle all your Small Parcel, Less Than Truckload (LTL), full Truckload (TL), domestic and international, or a combination of them all.

Technology-Driven Software for Today and Tomorrow

The suite of DigitalShipper Windows-based products is built on Microsoft's .NET technology platform and through our Web Services, Data Wizard, and standard Plug-in Architecture developers can program custom business rules and automation without having to hire an integration specialist. DigitalShipper's technology makes it easy to customize your shipping solution to eliminate manual tasks, reduce errors, and significantly improve the overall shipping process.

DigitalShipper's SOA-designed Web Services offer the most robust and complete set of shipping methodologies in the marketplace today for designing your own shipping front-end or integrating DigitalShipper directly into other applications.

Connecting DigitalShipper to Your Business Systems

DigitalShipper provides the most flexibility to seamlessly integrate with existing ERP, WMS, TMS, E-Commerce, Accounting, or Customer Service systems to exchange the necessary information for shipping. Whether you have one source of data or multiple sources of data, DigitalShipper can connect to them all. Integrating real-time data exchange between DigitalShipper and your business systems will improve the accuracy of shipping and increase throughput.

DigitalShipper fits into all processes of shipping including traditional shipping workstations, pick/pack stations, RF handhelds, in-line conveyor systems, batch/wave fulfillment, and desktop shipping.

An Affordable Solution for Your Shipping Processes

DigitalShipper includes many built-in features such as rate shopping, customer preferences, order consolidation, shipping notes, batch shipping, blind shipping, and many more to help you streamline and automate shipping processes.

One of the most cost-saving advantages of multi-carrier shipping software is the ability to rate shop. With DigitalShipper you can rate shop your negotiated rates to compare carriers and service levels for small parcel and LTL, calculate transit days to get shipments to their destinations on time, and perform special customer-based rating logic.

Shipping Expertise You Can Rely On

When you purchase DigitalShipper, not only are you getting a full-featured product, you are also getting the shipping experts behind it. The DigitalShipper team will make sure you benefit from the software's built-in features and work with you to automate your shipping processes and business rules to maximize the value of your DigitalShipper investment.

We have also partnered with leading industry companies to offer several value-added tools and services including address validation, shipping analytics, carrier auditing, rate negotiation, shipping insurance, and landed cost global services.
